Introduction:-

What is Virtual Assistant?

A virtual assistant is a self-employed worker who specializes in offering administrative services to clients from a remote location, usually a home office. Typical tasks a virtual assistant might perform include scheduling appointments, making phone calls, making travel arrangements, and managing email accounts.

Basic concept of Virtual Assistant

The working of Virtual Assistant uses principles like:

- Natural language processing
To understand users speech input
- Automatic speech recognition
To understand command given by user
- Artificial Intelligence
To learn information about behavior from user and to store it
- Inter process communication
To get other software information & applications

Working

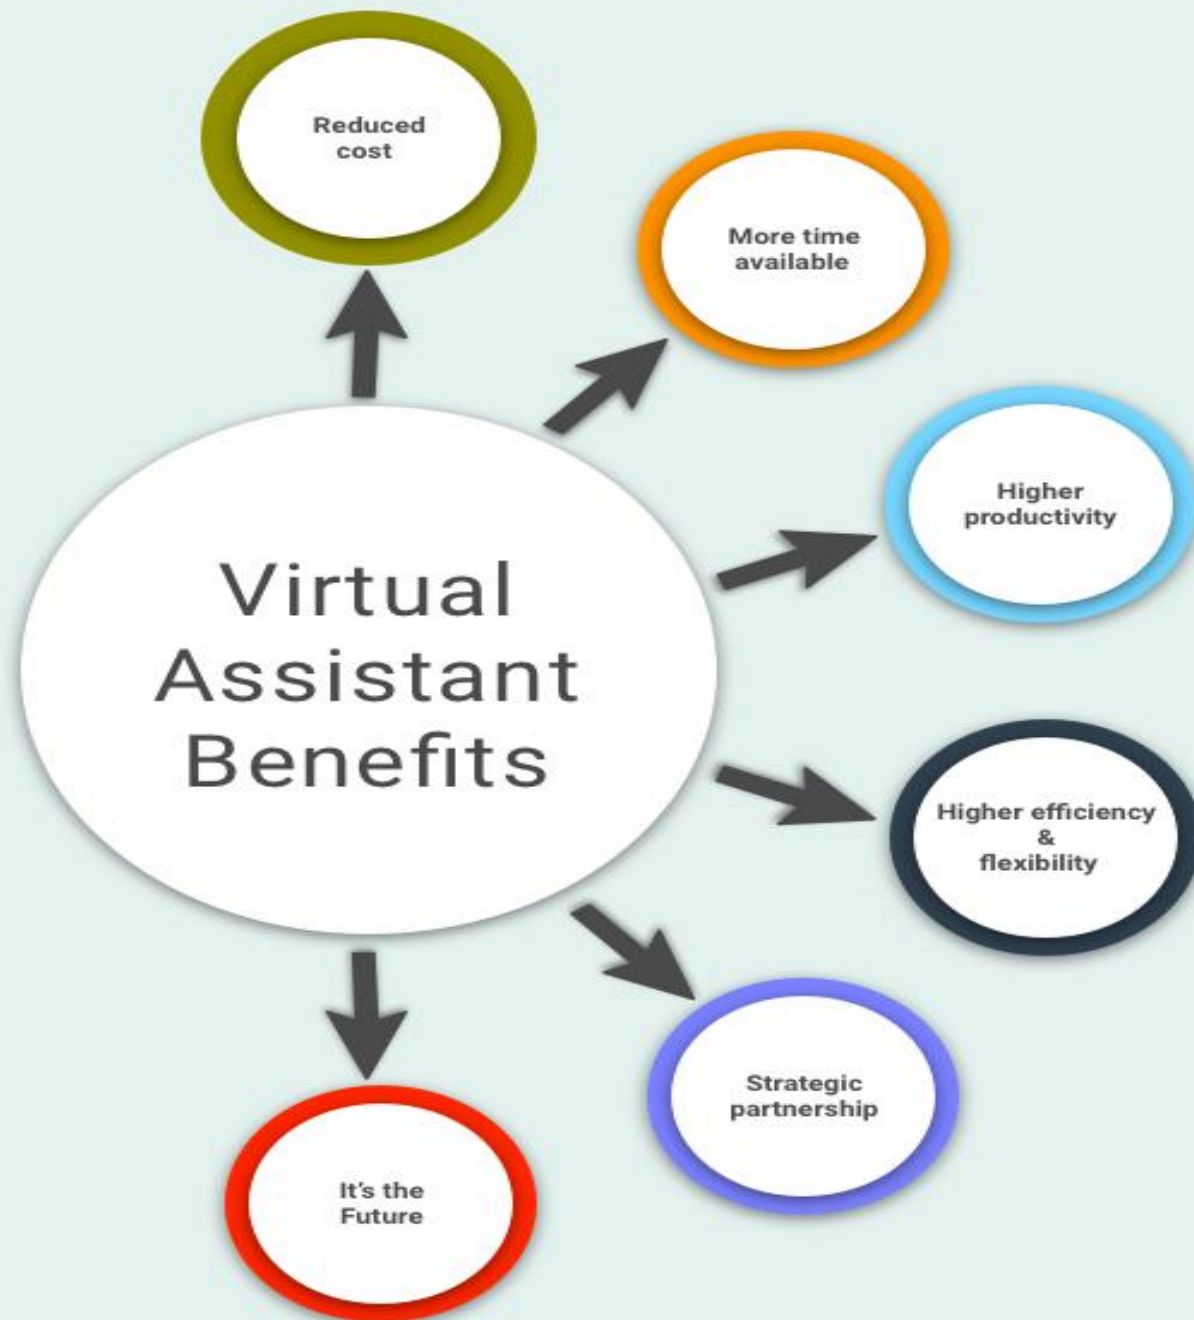

The working of Virtual Assistant consists of

- ❖ Speech to text
- ❖ Text analysis
- ❖ Interpret commands

Features of Virtual Assistant:

- it answers questions
- it can wish you
- it can search any thing in Google or any platform
- Can play Music and videos
- it can set Alarms, Reminders.
- Can send messages

Some examples of virtual assistant

Google Now, Siri and Cortana are all intelligent digital personal assistants on various platforms (iOS, Android, and Windows Mobile). In short, they help find useful information when we ask for it using our voice.

We can use them to make calls, send messages, set reminders, take notes, recognize music, find great restaurants, check your calendar, and more.

advantages

- It allows us to export & import data
- it can make lists
- it helps to plan the day
- It can recognize voice commands
- Store various information
- They are placed on small hand-held devices

Disadvantages

- Some times they have problem to hear wrong
- it doesn't work on DND and silent modes
- They always required internet access
- Most of virtual assistants understand properly in english language only
- While we are talking to each other it takes our talks as a task

Here I have created a virtual assistant by python named Jenny in visual studio code it accepts given command and perform output

Steps and codes for Virtual Assistant is given below:

□ Yellow color represents installation setup on the terminal panel/on cmd , to type the given commands in it

□ color represents the code to be typed in vs code

Steps to create AI

Step 1: install vs. code software, install python 3 & add extension python to vs. code

Step 2: on the terminal panel/on cmd ,type `pip install pyttsx3`

Step 3: open vs. code, create new file and type on first line,
{how many import tasks are present type on top one after another}

Step 4: type,

```
engine = pyttsx3.init('sapi5')
voices = engine.getProperty('voices')
print(voices[1].id)
engine.setProperty('voice',voices[1
```

{pyttsx3 is a google speech to text engine}

Step 5: you can change voices above: 0 for male voice and 1 for female voice
if you want more voices then you have to download voices

Step 6: on the terminal panel/on cmd ,type 1)`pip install win32`
2)`pip install pyAudio`
3)`pip install wikipedia`
4)`pip install SpeechRecognition`

Step 7: `def speak(audio):`
 `engine.say(audio)`
 `engine.runAndWait()`
 {type the above statement}

Step 8: `def wishMe():`
 `hour = int(datetime.datetime.now().hour)`
 If `hour >= 0` and `hour < 12`:
 `speak("GOOD MORNING SIR!")`
 elif `hour >= 12` and `hour < 18`:
 `speak("GOOD AFTERNOON SIR!")`
 else:
 `speak("GOOD EVENING SIR!")`

 `speak("I am jenny sir how can i help you")`

{by this command your Virtual Assistant will wish you based on time and asks how may I help you}

Step 9:

By these commands our VA is ready to hear tasks and wishes you every time you run the program now we can add tasks for our VA to perform

```
def takecommand():
```

```
    r = sr.Recognizer()
    with sr.Microphone() as source:
        print("Listening...")
        r.pause_threshold = 1
        audio = r.listen(source)
    try:
        print("Recognizing...")
        query = r.recognize_google(audio,
language='en-in')
        print(f"User said: {query}\n")

    except Exception as e:
        # print(e)
        print("Say that again please...")
        return "None"
    return query

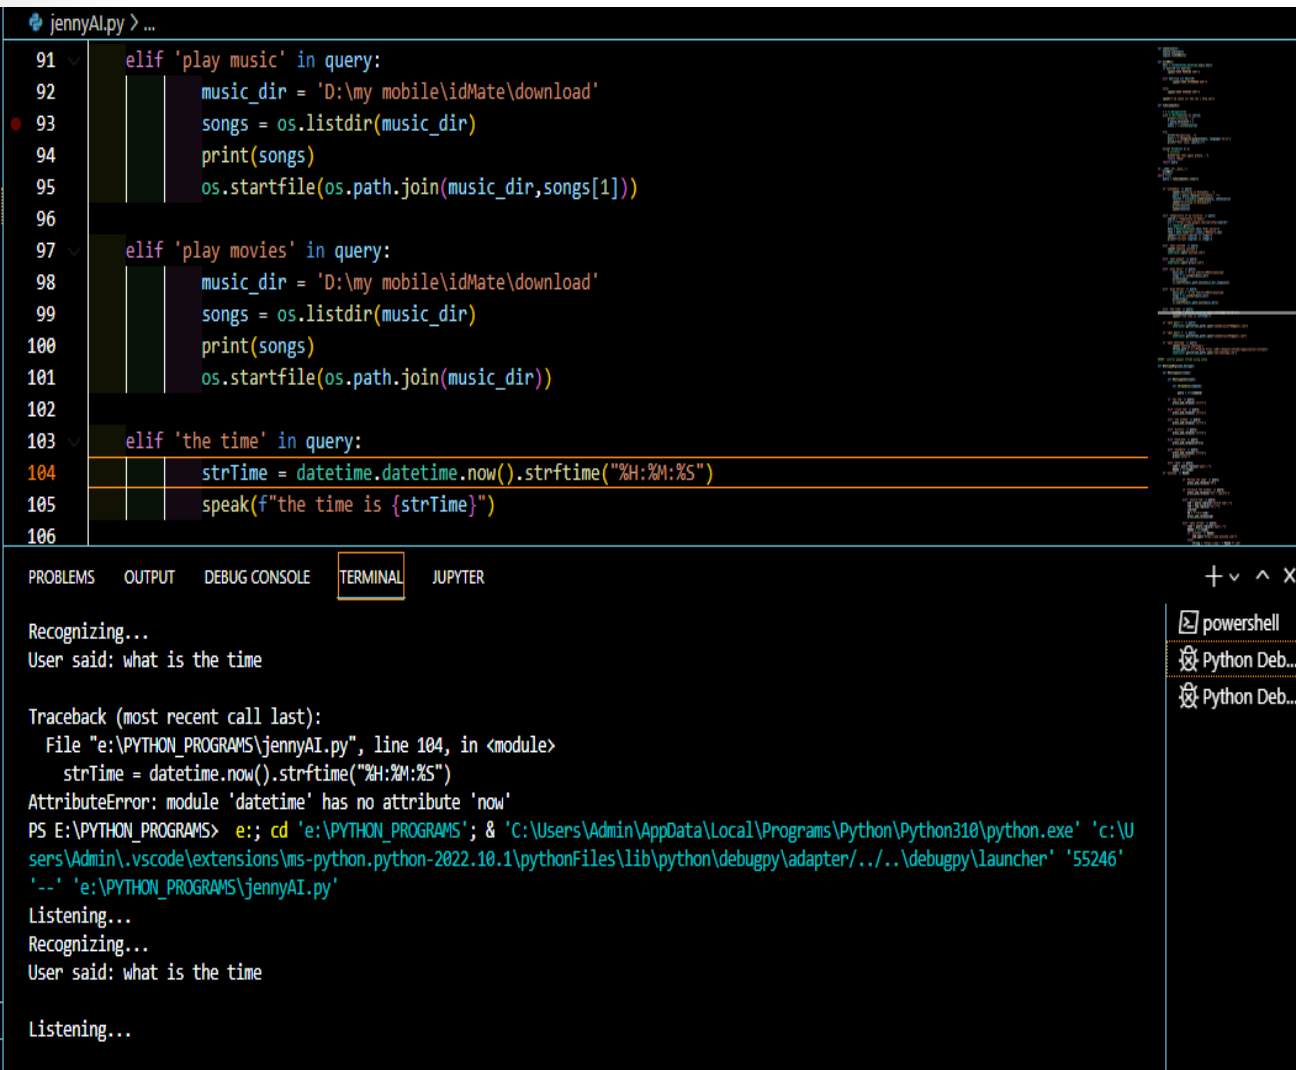

if __name__=="__main__":
    wishMe()
    while True:
        query = takecommand().lower()
```

Step 10: if 'the time' in query:

```
strTime = datetime.datetime.now().strftime("%H:%M:%S")  
speak(f"the time is {strTime}")
```

This is the time function

Command: what is the time

The screenshot shows a VS Code editor with a Python file named 'jennyAI.py'. The code is as follows:

```
91 elif 'play music' in query:  
92     music_dir = 'D:\my mobile\idMate\download'  
93     songs = os.listdir(music_dir)  
94     print(songs)  
95     os.startfile(os.path.join(music_dir,songs[1]))  
96  
97 elif 'play movies' in query:  
98     music_dir = 'D:\my mobile\idMate\download'  
99     songs = os.listdir(music_dir)  
100    print(songs)  
101    os.startfile(os.path.join(music_dir))  
102  
103 elif 'the time' in query:  
104     strTime = datetime.datetime.now().strftime("%H:%M:%S")  
105     speak(f"the time is {strTime}")  
106
```

The terminal output shows the following sequence of events:

```
Recognizing...  
User said: what is the time  
  
Traceback (most recent call last):  
  File "e:\PYTHON_PROGRAMS\jennyAI.py", line 104, in <module>  
    strTime = datetime.now().strftime("%H:%M:%S")  
AttributeError: module 'datetime' has no attribute 'now'  
  
PS E:\PYTHON_PROGRAMS> e:; cd 'e:\PYTHON_PROGRAMS'; & 'C:\Users\Admin\AppData\Local\Programs\Python\Python310\python.exe' 'c:\Users\Admin\.vscode\extensions\ms-python.python-2022.10.1\pythonFiles\lib\python\debugpy\adapter\..\..\debugpy\launcher' '55246'  
'-' 'e:\PYTHON_PROGRAMS\jennyAI.py'  
  
Listening...  
Recognizing...  
User said: what is the time  
  
Listening...
```

The terminal window also shows a list of open tabs: 'powershell', 'Python Deb...', and 'Python Deb...'.

YOU CAN ADD ANY PROGRAMS YOU WANT

Command: what is the temperature

```
jennyAI.py > ...
86     webbrowser.open("youtube.com")
87
88     elif 'open google' in query:
89         webbrowser.open("google.com")
90
91     elif 'play music' in query:
92         music_dir = 'D:\my mobile\idMate\download'
93         songs = os.listdir(music_dir)
94         print(songs)
95         os.startfile(os.path.join(music_dir,songs[1]))
96
97     elif 'play movies' in query:
98         music_dir = 'D:\my mobile\idMate\download'
99         songs = os.listdir(music_dir)
100        print(songs)
101        os.startfile(os.path.join(music_dir,songs[1]))

strTime = datetime.now().strftime("%H:%M:%S")
AttributeError: module 'datetime' has no attribute 'now'
PS E:\PYTHON_PROGRAMS> e.; cd 'e:\PYTHON_PROGRAMS'; & 'C:\Users\Admin\AppData\Local\Programs\Python\Python310\python.exe' 'c:\Users\Admin\.vscode\extensions\ms-python.python-2022.10.1\pythonFiles\lib\python\debugpy\adapter\..\..\debugpy\launcher' '55317'
'--' 'e:\PYTHON_PROGRAMS\jennyAI.py'
